## **ACKNOWLEDGEMENT**

On our journey of learning and growth, every step brings new opportunities to explore ourselves and sharpen our skills. The project of creating a movie storage website was a significant challenge for our team-both a chance to apply the knowledge we had gained in practice and an opportunity to push beyond our own limits. However, to complete the project in the most comprehensive way, we cannot overlook the invaluable support and guidance from our dedicated instructors.

We would like to express our heartfelt gratitude to Dr. Pham Van Tien and Assoc. Prof. Tran Thi Thanh Hai, who consistently accompanied and supported our team throughout the project. From the initial stages, with countless difficulties in shaping ideas and building the system structure, to solving complex technical problems, you not only provided meticulous guidance but also inspired us with their passion and profound expertise. Thanks to these solid foundations, we were able to successfully complete the project while gaining valuable new skills, including programming, research abilities, teamwork, and more.

Once again, we sincerely thank you both for everything you have done for our team. We deeply hope to have the opportunity to work with and learn from you in future projects!

## **ABSTRACT**

Under the growth of cinema, many great films have been created. However, no matter how outstanding they are, there will always be priceless scenes that leave a lasting impression on everyone. People, especially movie enthusiasts, wish to preserve them. The goal of this project is to design and build a digital library (movie gallery) to store outstanding movie clips and images. The project was implemented with a simple user interface. The design and functionality of the system were tested to optimize the user experience. Most of the project's objectives were achieved, but further research is needed to expand the system's features in the future.

# 1. Introduction

## 1.1. Motivation

The main reason for conducting this project is that more and more people want to preserve and share memorable movie moments in an easy and organized way.

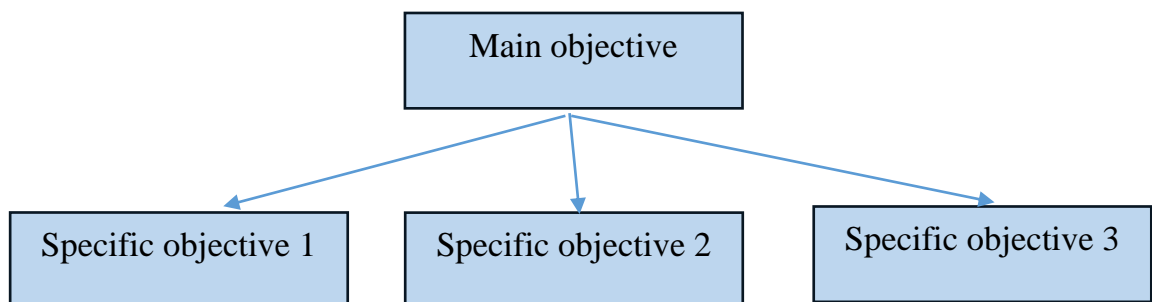

Currently, existing platforms still have many limitations. They often do not allow users to store or download movie clips, nor do they support discussions or sharing of favorite images and videos. This makes it difficult for movie enthusiasts to manage and enjoy their favorite movie content as they wish.

Therefore, this project aims to create a digital library (compilation) for movies. The platform will be simple and easy to use, allowing users to store, watch, download, and discuss memorable movie clips or images. One significant challenge is that movie images often cannot be downloaded directly due to the lack of a clear or official source for these images.

## 1.2. Objectives

### *Main objectives*

The website as a compilation of scene (videos and images) from movies

*Figure 1.2.1: Objective of the project*

### *Specific objectives*

- Specific objective 1: Allow people to view contents clearly, also they can download them.
- Specific objective 2: Allow people to give their opinion for the shortcuts.
- Specific objective 3: Decentralization, for the owner, allow him to adjust contents (add, update, delete).

## 2. Methodology

### 2.1. State of the art

#### *Methods for Movie Gallery*

Approach to Web Development: Developing project ideas using software tools recommended by instructors, such as Figma, FigJam, JIRA, etc. Specifically, this involves outlining content, documentation, and problem-solving approaches.

From there, basic requirements are outlined in sequence: researching user needs, identifying suitable tools, creating a prototype or rough draft of the website, adding additional features, refining, and finalizing the product.

#### *Existing products for movie gallery*

*Table i: Comparison of existing products*

<u>Product</u>	<u>Main features</u>	<u>Advantages</u>	<u>Drawbacks</u>
Netflix	<ul style="list-style-type: none"><li>- Movie recommendations based on user preferences.</li><li>- Manage movie watchlist and continue watching.</li><li>- Video quality in HD, 4K, and HDR.</li></ul>	<ul style="list-style-type: none"><li>- Easy-to-use interface, user-friendly.</li><li>- Fast and stable loading speed.</li><li>- Rich and diverse content in various genres and countries</li></ul>	<ul style="list-style-type: none"><li>- High subscription cost for premium plans.</li><li>- Some content is region-restricted.</li><li>- Ads (in lower-cost subscription plans).</li></ul>

HBO	<ul style="list-style-type: none"> <li>- Stream original HBO content.</li> <li>- Provides HD and 4K video quality.</li> <li>- Integration with paid cable services.</li> </ul>	<ul style="list-style-type: none"> <li>- Easy-to-use interface and easy content search.</li> <li>- Fast loading speed with minim</li> <li>- Exclusive and well-known original content.al issues</li> </ul>	<ul style="list-style-type: none"> <li>- High subscription cost, especially without promotional offers.</li> <li>- Content is limited to certain regions or countries.</li> <li>- Ads may appear in some subscription plans.</li> </ul>
IMDb	<ul style="list-style-type: none"> <li>- Provides detailed information about movies, actors, ratings, and reviews</li> <li>- Movie suggestions based on trends and user ratings.</li> <li>- Offers trailers, videos, and updated information about films.</li> </ul>	<ul style="list-style-type: none"> <li>- Easy-to-use interface with a visual design.</li> <li>- Fast loading speed with accurate search functionality.</li> <li>- Rich content with reviews and ratings.</li> </ul>	<ul style="list-style-type: none"> <li>- No streaming service like the others.</li> <li>- Ads appear on the website and mobile app.</li> <li>- Some features are only available for paid users (IMDb Pro)</li> </ul>

## Discussion

### 2.2. Application of the 9 steps in engineering design process

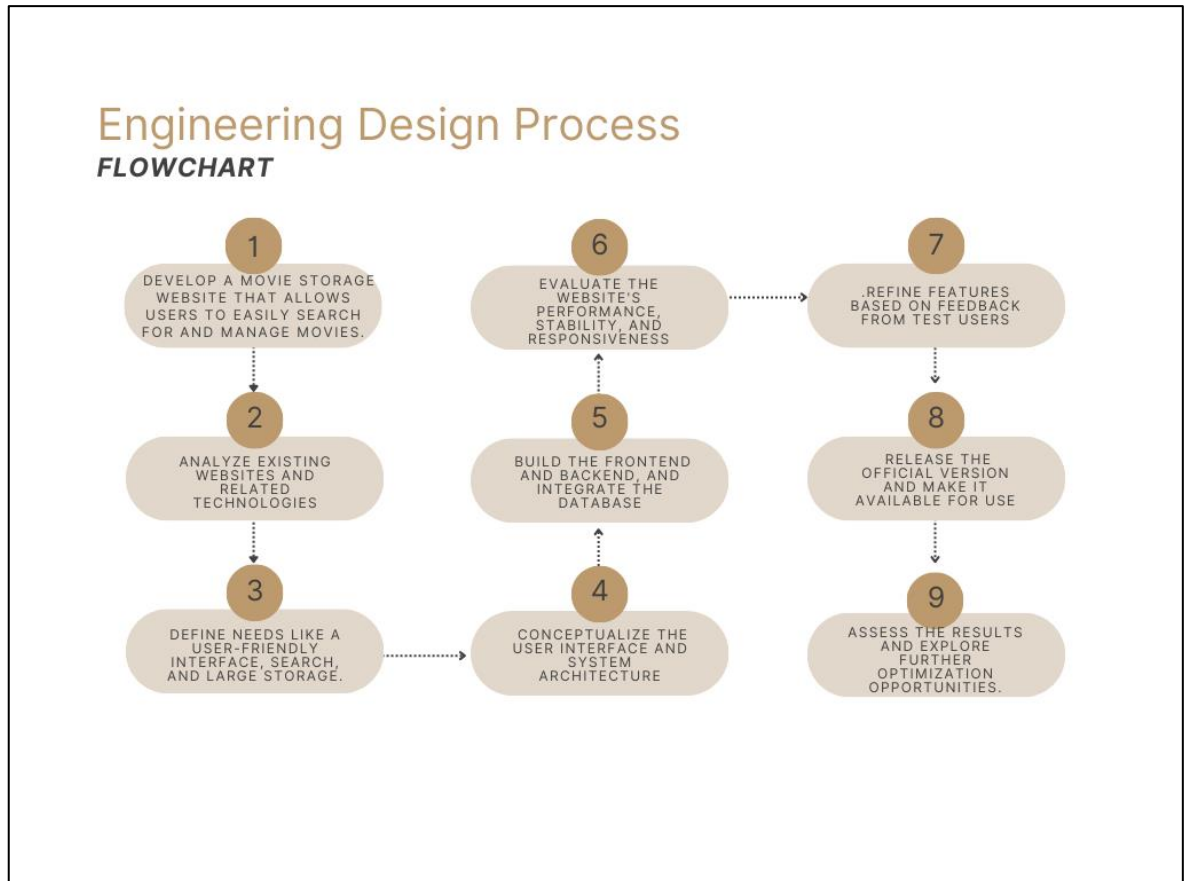

Figure 2.2.1: Design Process

## 3. Project implementation

### 3.1. Step 1: User requirement

Method: Study existing system

Final requirement: The website must allow users to view contents, download them and give their opinion about them. For an owner, it must let him add, update, and delete contents privately.

### **3.2. Step 2: Specifications**

#### ***Functionality***

Function 1: View contents

Function 2: Search contents

Function 3: Download contents

Function 4: Rating Contents

Function 5: Decentralization

Function 6: Comments

#### ***Non functionality***

Non- Function 1: View contents: view on the main page or on the dynamic tab with more specific details.

Non- Function 2: Search contents: search by name or by the original movie genre.

Non- Function 3: Download contents: download as adjustable resolution.

Non- Function 4: Rating contents: rate as point from 0 to 5.

Non- Function 5: Decentralization: divide into three roles: Admin, Member and Guest (tasks that each role can do are depicted later)

Non- Function 6: Comments: Permit users to give their opinion by word to the contents.

Table ii: Summary of the main functions of our proposed system / product

Function	Description of the function	Priority (Required / Optional)
1	View contents	Required
2	Search contents	Required
3	Download contents	Required (Optional for adjustable resolution)
4	Rating contents	Optional
5	Decentralization	Required
6	Comments	Optional

### 3.3. Step 3: Planning

Summary	Status	Assignee	Due date	Labels	Created	Updated	Reporter

### 3.6. Step 6: Best selection

Table iv: Comparison of the RMDBS<sup>1</sup>

Item	Criteria 1 Price	Criteria 2 Reliability	Criteria 3 Appearance
MySQL	Free (Community Edition), Paid (Enterprise Edition)	High	Friendly
SQL Server	Paid (with free Express edition)	High	Professional
PostgreSQL	Free (Open Source)	High	Complicated for new users

➔ Choice: MySQL, because one of the members of the group has used it before

---

<sup>1</sup> <https://aws.amazon.com/vi/compare/the-difference-between-sql-and-mysql/> ,  
<https://aws.amazon.com/vi/compare/the-difference-between-mysql-vs-postgresql/>

Table v: Comparison of the server's programming language <sup>2</sup>

Item	Criteria 1 Price	Criteria 2 Reliability	Criteria 3 Appearance
C#	Free	High	Rigorous datatype, static typing
JavaScript (JS)	Free	Medium	Non- requirement datatype declaration, dynamic typing
Python	Free	High	Clean, readable syntax, versatile usage

➔ Choice: JS for synchronization with the client

---

<sup>2</sup> <https://learn.microsoft.com/en-us/dotnet/csharp/>  
<https://developer.mozilla.org/en-US/docs/Web/JavaScript>  
<https://www.python.org/doc/>

Table vi: Comparison of storing content method.

Item	Criteria 1 Price	Criteria 2 Reliability	Criteria 3 Appearance
Online (by someone else)	Free	Medium	Available
Online (by ourselves)	Free	High	Require editing and uploading
Local	Free	High	Not portable

→ Choice: Priorly the first option, then the second option. However, still store the resources locally for avoiding risks.

### 3.7. Step 7: Prototyping

Drawn by Goodnotes.

Figure 3.7.1: Preliminary Design for Main page

The image shows a hand-drawn preliminary design for an 'Add Contents' site, divided into two sections: 'Add Video' and 'Add Image'. Each section contains a form with three input fields and a submit button.

**Add Video**

- Title:
- Source's Link:
- (...):  (labeled 'other attributes')
- Submit:  (labeled 'button')

**Add Image**

- Title:
- Source's Link:
- (...):  (labeled 'other attributes')
- Submit:  (labeled 'button')

Figure 3.7.2: Preliminary Design for Add Contents site.

### Update Video

Video's ID

New title

New src

(...)

other attributes

Submit

button

---

### Update Image

Image's ID

New title

New src

(...)

other attributes

Submit

button

Figure 3.7.3: Preliminary Design for Update Contents site

The diagram is a hand-drawn preliminary design for a 'Delete Contents' site, presented on a grid background. It is divided into two main sections by a horizontal line.

**Top Section: Delete Video**

- The title 'Delete Video' is written in black.
- The label 'Video's ID' is written in blue.
- Next to the label is a black rectangular text box.
- An orange arrow points from the text 'text-box' to the text box.
- To the right of the text box is a red rectangular button labeled 'Submit' in red.
- An orange arrow points from the text 'button' to the 'Submit' button.

**Bottom Section: Delete Image**

- The title 'Delete Image' is written in black.
- The label 'Image's ID' is written in blue.
- Next to the label is a black rectangular text box.
- An orange arrow points from the text 'text-box' to the text box.
- To the right of the text box is a red rectangular button labeled 'Submit' in red.
- An orange arrow points from the text 'button' to the 'Submit' button.

Figure 3.7.4: Preliminary Design for Delete Contents site.

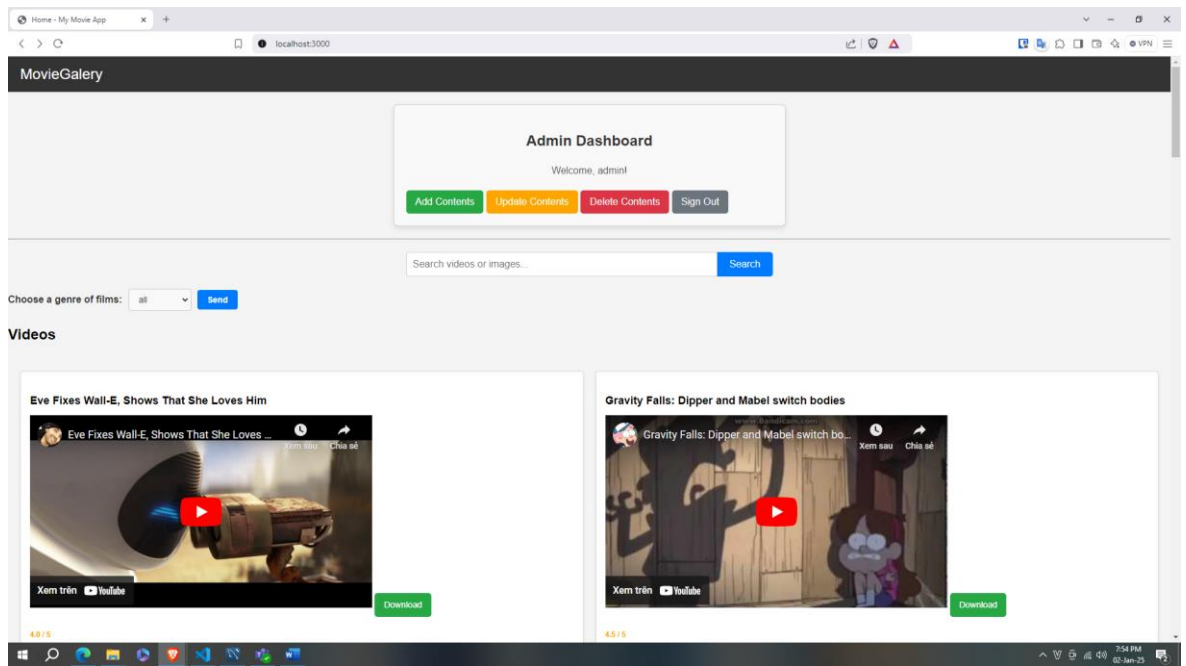

Figure 3.7.5: Final look of the Main page

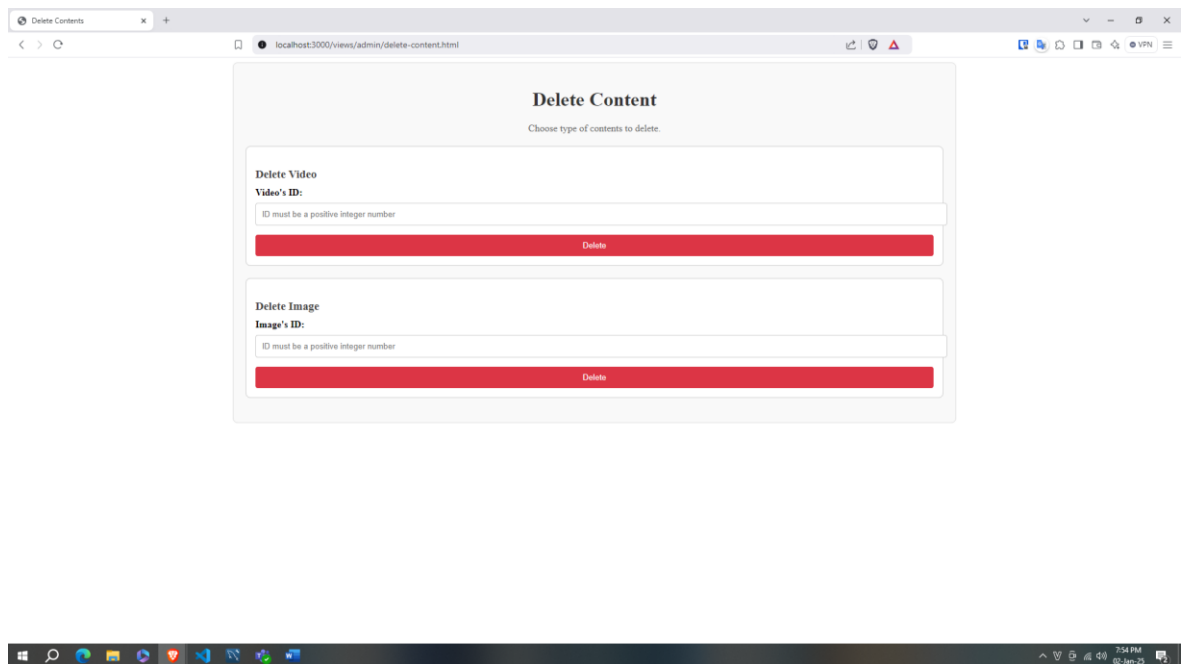

Figure 3.7.6: Final look of the Delete Content site

### 3.8. Step 8: Testing

Table vii: Add, Update, Delete contents Testing.

<u>Affective factors</u>	<ul style="list-style-type: none"><li>- Contents' ID: user can type negative value or non-existing values.</li><li>- Links: They should start with <a href="http://">http://</a> or <a href="https://">https://</a></li></ul>
<u>Scenario for testing</u>	<ul style="list-style-type: none"><li>- Provide two type of JSON data: one is invalid, and the others is valid.</li><li>- Using Postman, to test the server independently.</li><li>- After obtained a good result, test with the client's site.</li></ul>
<u>Conducting</u>	<ul style="list-style-type: none"><li>- Data:<ul style="list-style-type: none"><li>○ Invalid data:<ul style="list-style-type: none"><li>▪ Let the id be negative or non-existing.</li><li>▪ Let the links not to start with <a href="http://">http://</a> or <a href="https://">https://</a></li></ul></li><li>○ Valid data</li></ul></li></ul>
<u>Analyze the test result</u>	<ul style="list-style-type: none"><li>- Result:<ul style="list-style-type: none"><li>○ Invalid data: response the error status</li><li>○ Valid data: response the successful status</li></ul></li><li>- Comments: The program realizes the invalid data and response to the user</li></ul>

Table viii: Rating Testing

<u>Affective factors</u>	<ul style="list-style-type: none"> <li>- Contents' ID: user can type negative value or non-existing values.</li> <li>- Point: it must be the integer number from 0 to 5</li> <li>- Only Admin and Member are allowed to do this feature.</li> </ul>
<u>Scenario for testing</u>	<ul style="list-style-type: none"> <li>- Provide two type of JSON data: one is invalid, and the others is valid.</li> <li>- Using Postman, to test the server independently.</li> <li>- After obtained a good result, test with the client's site.</li> </ul>
<u>Conducting</u>	<ul style="list-style-type: none"> <li>- Data: <ul style="list-style-type: none"> <li>o Invalid data: <ul style="list-style-type: none"> <li>▪ Let the id be negative or non-existing.</li> <li>▪ Let the point be not the integer number from 0 to 5.</li> </ul> </li> <li>o Valid data</li> </ul> </li> <li>- At the client's site, try that whether the feature works if the user has not signed in.</li> </ul>
<u>Analyze the test result</u>	<ul style="list-style-type: none"> <li>- Result: <ul style="list-style-type: none"> <li>o Invalid data: When testing the server independently, response the error status. (We didn't test this situation at the client's site because rigorous settings).</li> <li>o Valid data: response the successful status and change the average point for each video and image too.</li> <li>o If users have not signed in yet, the program show out the problem.</li> </ul> </li> <li>- Comments: The program works successfully.</li> </ul>

Table ix: Sign up Testing.

<u>Affective factors</u>	<ul style="list-style-type: none"> <li>- The username must be non-existing</li> </ul>
<u>Scenario for testing</u>	<ul style="list-style-type: none"> <li>- Provide two type of JSON data: one is invalid, and the others is valid.</li> <li>- Using Postman, to test the server independently.</li> <li>- After obtained a good result, test with the client's site.</li> </ul>
<u>Conducting</u>	<ul style="list-style-type: none"> <li>- Data: <ul style="list-style-type: none"> <li>o Invalid data: The existing username</li> <li>o Valid data</li> </ul> </li> </ul>
<u>Analyze the test result</u>	<ul style="list-style-type: none"> <li>- Result: <ul style="list-style-type: none"> <li>o Invalid data: When testing the server independently, response the error status.</li> <li>o Valid data: response the successful</li> </ul> </li> <li>- Comments: The program works successfully.</li> </ul>

Table x: Sign in Testing

<u>Affective factors</u>	<ul style="list-style-type: none"> <li>- The username must be existing</li> </ul>
<u>Scenario for testing</u>	<ul style="list-style-type: none"> <li>- Provide two type of JSON data: one is invalid, and the others is valid.</li> <li>- Using Postman, to test the server independently.</li> <li>- After obtained a good result, test with the client's site.</li> </ul>
<u>Conducting</u>	<ul style="list-style-type: none"> <li>- Data: <ul style="list-style-type: none"> <li>o Invalid data: The non-existing username</li> <li>o Valid data</li> </ul> </li> </ul>
<u>Analyze the test result</u>	<ul style="list-style-type: none"> <li>- Result: <ul style="list-style-type: none"> <li>o Invalid data: When testing the server independently, response the error status.</li> <li>o Valid data: response the successful</li> </ul> </li> <li>- Comments: The program works successfully.</li> </ul>

## **4. Discussions**

- Limitation:
  - Update, Delete Contents using two independent form requiring id  
-> not good for the UX because the user must look up the id in dynamic tabs.
  - Do not contain Comment, Adjustable resolution for downloading.
  - Users have to view contents randomly that not based on their interests.

## **5. Conclusions and future works**

- Achievement compared to the objective.
  - Achievement: get a local version of the website whose features: View Contents (main page and dynamic tab); Decentralization; Add, Update, Delete Contents; Download Contents (no adjustable resolution), Rating, No Comments feature.
  - Compare to the objectives: 75%
- Future Work:
  - Redesign the method about technicality and user's experience.
  - Redesign the database and adjust the source code to add Comments features let the program display the contents based on users' interests.
  - Learn a method to let users download contents that theses' resolution is adjustable.

## APPENDIX – TEST RESULT

### i. Test result for Update Image (valid data)

Method: POST	url: <a href="http://localhost:3000/api/admin/UpdateImage">http://localhost:3000/api/admin/UpdateImage</a>
Input	<pre>{   "id": 17<sup>3</sup>,   "title": "Wayne's World (1992) Head banging to Bohemian Rhapsody",   "storage": "cloud",   "src": "https://panandslam.com/wp-content/uploads/2020/04/waynes-world-car-queen.jpg?w=636&amp;h=424",   "movie_genre": "Comedy",   "image_style": "Happy",   "width": 636,   "height": 424,   "format": "png",   "download_link": "https://panandslam.com/wp-content/uploads/2020/04/waynes-world-car-queen.jpg?w=636&amp;h=424",   "upload_date": null }</pre>
Output	<pre>{   "message": "Image content updated successfully",   "data": {     "fieldCount": 0,     "affectedRows": 1,     "insertId": 0,     "info": "Rows matched: 1 Changed: 1 Warnings: 0",     "serverStatus": 2,     "warningStatus": 0,     "changedRows": 1   } }</pre>

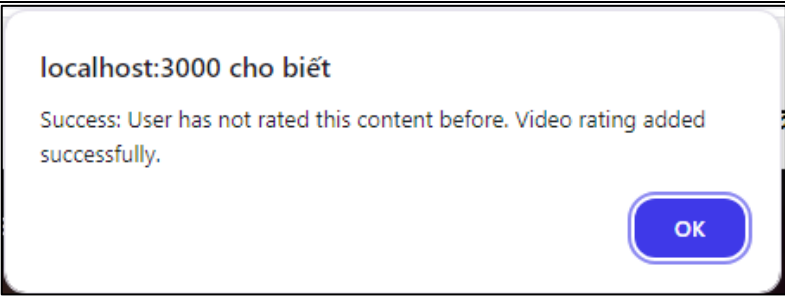

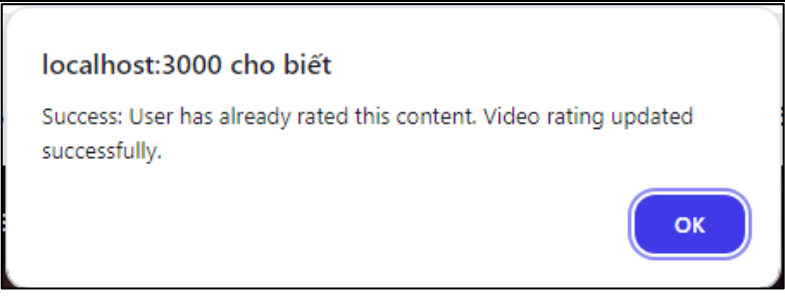

---

<sup>3</sup> In this case, we insert an image whose id is 17 before, so it is valid.

ii. Test result for Update Image (negative ID)

Method: POST	url: <a href="http://localhost:3000/api/admin/UpdateImage">http://localhost:3000/api/admin/UpdateImage</a>
Input	<pre>{   "id": -1,   "title": "Wayne's World (1992) Head banging to Bohemian Rhapsody",   "storage": "cloud",   "src": "https://panandslam.com/wp-content/uploads/2020/04/waynes-world-car-queen.jpg?w=636&amp;h=424",   "movie_genre": "Comedy",   "image_style": "Happy",   "width": 636,   "height": 424,   "format": "png",   "download_link": "https://panandslam.com/wp-content/uploads/2020/04/waynes-world-car-queen.jpg?w=636&amp;h=424",   "upload_date": null }</pre>
Output	<pre>{   "error": "Failed to update image content",   "details": "Image ID not found" }</pre>

iii. Test result for Rating

	The user has not rated the content before
	The user has already rated the content before
